1460. CHRONAXY OF THE VESTIBULAR ORGAN, AND ITS SIGNIFICANCE IN
PAEDIATRIC OTOTOLOGY - Chronaksja narządu przedśrodkowego i jej znacze-
nie w otologii dziecięcego wieku - Mitrnowicz - Modrzewiecka A.
Oddz. Foniatrycznego Klin. Otolaryngol. A.M., Warszawa - OTOLARYNGOLOGIA
POL., 1958, 12/4 (479-484) Illus. 3

The aim of this study was to establish chronaxy measurements of the vestibular organ in children, in health and in pathological conditions. Methods of examining the vestibular organ have changed with the introduction of measurement of the time necessary to induce the reaction, i.e. chronaxy. Chronaximetry of the vestibular organ of man has been elaborated by Bourguignon. The chronaxy of the vestibular organ is important for differential diagnosis, in combination with investigations by the caloric test. The last is a stimulus for the peripheral receptor (semicircular canals) of the vestibular organ, while the electrical current irritates the whole vestibular nerve. The method introduced by the author of investigation through the eye-ball, facilitates the differentiation of labyrinthine diseases from retro-labyrinthine ones. The examination of hearing, and recruitment phenomena, are also taken into account. Chronaximetric examinations through the eye-ball confirm the reports published in 1952 by Bourguignon, who stated that in cases of aphasia the left-sided chronaxy of the vestibular organ considerably exceeds that on the right side. In cases of aphasia combined with diseases of the peripheral hearing organ, examination through the eye-ball is more useful.

1495. THE EXAMINATION OF THE ORGAN OF HEARING IN CASES OF CLEFT PALATE - Badania narządu słuchowego w rozszczepach podniebienia - Mitrinowicz - Modrzejewska A., Ośrodku Foniatryczego Klin. Laryngol.

A.M., Warszawa - CZAS. STOMAT. 1957, 10/11 (661-670) Graphs 3 Ilus. 2
The problem of rehabilitation of speech after plastic operation in cases of congenital schisis is still unsolved and requires a great deal of study and observation in order to explain the causes which make the patient a mumbling cripple after a correctly performed operation. The disorders of hearing due to the impairment of the conducting part of the organ of hearing (inflammatory conditions of the eustachian tube and the middle ear) and the inner ear and the higher centres of hearing in the CNS should be mentioned as some of the causes making complete post-operative rehabilitation difficult. Among patients with congenital schisis of the palate the disorders of speech of central origin can also be observed; they have been verified by chronaxymetric examinations. These disturbances are the causes of difficulties of post-operative rehabilitation. Therefore not only the peripheral injury of the organ of speech but also injury of the organ of hearing and central tracts and speech centres contained in the left hemisphere of the brain are the cause of crippling in cases of congenital schisis of the palate. This also refers to pseudo-schisis of the palate.

*Mitrinović, D. S. Važnije nejednakosti. [Important
inequalities.] Matematička Biblioteka, No. 7. Univer-
zitet u Beogradu, Belgrade, 1958. 64 pp.

Fifteen pages of various introductions are followed by
two main parts: a twenty-two page collection of in-
equalities with proofs (absolute values, various means,
Abel's convergence test and convex functions), and a
thirty-five page collection of inequalities without proofs,
culled from a dozen texts, such as Crosland's "Upper school
algebra", Hardy's "A course in pure mathematics", and
some Russian collections. In spite of the booklet's title,
Schwarz' (Bunyakovsky's) inequality appears in one line,
Hölder's and Minkowski's not at all.

1-FW

The following formula is proved, among others:

$$\sum_{k=0}^{\infty} \left\{ (-1)^k \binom{m}{k} / \prod_{i=1}^r [n + (i+k-1)\phi] \right\} \\ = (\nu+m-1)! / [\phi^\nu (\nu-1)! (n/\phi)_{\nu+m}],$$

where m , ν are natural numbers, ϕ and n are positive reals, and

$$(n/\phi)_{\nu+m} = \prod_{s=1}^{\nu+m} [(n/\phi) + s - 1].$$

Several interesting corollaries are given.

TITLE: Study of noniron asymmetric two-lens beta spectrometer with corrective coils

SOURCE: Bulgarska akademiya na naukite. Doklady, v. 18, no. 12, 1965, 1099-1102

TOPIC TAGS: radiation spectrometer, optic resolution, chromatic aberration, light aberration, optic lens

ABSTRACT: A new two-lens ironless beta spectrometer has been constructed at the Department of Atomic Physics of Sofia University. By means of several correction coils the instrument attained a satisfactory intensity with a good resolving power (1.9%). The article gives a brief description of the device and presents its characteristics. The improved resolving power is attained by 1) an increase in the inlet angle; 2) a decrease in spherical aberration; and 3) an increase in the coefficient of chromatic aberration. Maximum energy is 4.0 MeV. This paper was presented by Academician H. Kristov on 1 September 1965. Orig. art. has: 5 figures and 2 tables.

Title : Decrease of Immunological Reaction When Homologous non-Specific Gamma Globulins are Introduced

Orig Pub : Studii si cercetari fiziol. Acad. RPR, 1957, 2, No 1-2, 175-185

Abstract : Rabbits (8) when immunized with Proteus X₁₉ received non-specific gamma-globulin. Control animals (8) were only immunized. The production of antibodies in experimental animals was less pronounced than in control animals.
